

CLAIMS

What is claimed is:

1. An eyeglass holder comprising:
a clip attachable to a visor of a headwear;
a fastening element extending from said clip, said fastening element being adapted to fixedly hold a pair of eyeglasses.
2. The eyeglass holder according to claim 1, wherein said fastening element is slidable with respect to said clip.
3. The eyeglass holder according to claim 1, wherein said fastening element is pivotable with respect to said clip.
4. The eyeglass holder according to claim 1, further comprising an intermediate attachment element slidably attached to said clip, said fastening element being pivotally attached to said intermediate attachment element.
5. The eyeglass holder according to claim 2, wherein said fastening element is slidable with respect to said clip towards and away from a face of a wearer of said headwear.
6. The eyeglass holder according to claim 1, wherein said fastening element comprises a gripping element adapted to fixedly hold a pair of eyeglasses, said gripping element being slidably mounted on said fastening element.
7. The eyeglass holder according to claim 6, wherein said gripping element is slidable upwards and downwards with respect to a wearer of said headwear.
8. The eyeglass holder according to claim 6, wherein said gripping element imparts a curvature to a portion of said eyeglasses.
9. The eyeglass holder according to claim 1, wherein said clip comprises friction enhancers for enhancing friction between said clip and a visor of a headwear.
10. The eyeglass holder according to claim 1, further comprising a mounting stud on said clip.
11. The eyeglass holder according to claim 10, wherein said mounting stud is removably attached to said clip.
12. The eyeglass holder according to claim 10, further comprising a flag attached to said mounting stud.
